

9th International Conference on Drosophila Heterochromatin

Gubbio, Italy

May 25–29, 2009

Gubbio is the best medieval city in Umbria well known for its renaissance art and traditional food. The meeting will be similar in format and size to the previous ones with 50–60 speakers and no more than 140 participants. The meeting will give the opportunity to discuss the latest advances in Heterochromatin Biology and the Epigenetic Mechanisms of gene regulation.

Major topics:

- Position effect variegation and chromatin structure
- RNAi and heterochromatin
- Chromatin structure and gene expression
- Heterochromatic genes
- Centromeres
- Telomeres
- Heterochromatin and chromosome pairing
- Euchromatin/heterochromatin interaction system
- Highly and middle repetitive DNA and heterochromatin
- Heterochromatic genome sequencing
